

Michael Bryan Heramil

Full-Stack Web Developer

contactme@mbheramil.com · mbheramil.com · Philippines · open to remote worldwide

SUMMARY

Full-stack web developer with 10+ years building and operating production websites, currently responsible for a live fleet of 500+ WordPress and Shopify sites along with the custom plugins, Shopify apps, dashboards, and monitoring tools that make working at that scale possible. Comfortable across the whole lifecycle (build, migrate, maintain, monitor), and experienced at integrating AI into WordPress and Shopify sites, alongside Google Cloud and AWS infrastructure, where a project genuinely calls for it. Equally used to owning internal tooling end to end and to delivering bespoke client systems that off-the-shelf products couldn't cover.

EXPERIENCE

Full-Stack Web Developer, Simple.biz

March 2023 – Present

Remote · WordPress, Shopify, Wix, Duda, PixelTogether

- Manage and maintain a fleet of 500+ client sites across WordPress, Shopify, Wix, and Duda, covering updates, uptime, performance, integrations, and long-term support.
- Built **WP Hub**, an internal dashboard aggregating every site through the WordPress REST API, cutting multi-site maintenance overhead by roughly 80% and turning half-day update runs into minutes.
- Built **Server Checker**, automating uptime, SSL-expiry, and server-health monitoring across the fleet, which dropped average issue-detection time from hours to minutes and replaced per-site third-party monitoring.
- Handled 100+ sites through the full lifecycle of build, migration, maintenance, and monitoring, planning hosting and platform moves to avoid downtime, and improving front-end performance through caching, image optimisation, and CloudFront delivery.
- Write custom WordPress plugins and custom Shopify apps for single-store use rather than public distribution, extending both platforms past what off-the-shelf products cover, working with the Admin and Storefront APIs, OAuth, webhooks, and WordPress hooks.
- Deliver bespoke client systems where off-the-shelf products could not fit the workflow, spanning custom themes, WooCommerce and Liquid work, standalone dashboards, and AI features integrated directly into WordPress and Shopify: database-backed chatbots that answer from live client records, AI-assisted content generation, retrieval-augmented search over site data, and automation built on the OpenAI, Gemini, and Claude APIs.

Full-Stack Web Developer, Independent / Freelance

2012 – 2023

Remote · WordPress, Shopify, Wix

- Ran an independent practice for over a decade, delivering WordPress and Shopify builds end to end for clients across a range of industries, covering scoping, development, launch, and ongoing support.
- Built custom themes and plugins, WooCommerce and Shopify storefronts, and platform migrations, expanding into Wix as client needs demanded.
- Owned the full client relationship: requirements, delivery timelines, hosting decisions, and long-term maintenance.

PLC Programmer, Metrologyx

2009 – 2012

- Programmed and commissioned PLC-based industrial control and measurement systems, building the automation and systems-logic grounding that still informs how I approach monitoring and tooling today.

SELECTED PROJECTS

Internal tools I built unprompted to make managing the fleet possible, alongside bespoke client systems.

WP Hub, internal multi-site management dashboard

2025 · ongoing

Self-initiated internal tool · JavaScript SPA · AWS Lambda · S3 · CloudFront · WordPress REST API · PHP · Bitrix24 CRM

- Single interface to monitor, update, and administer 500+ sites, with plugin and theme update status, DNS and SSL checks, and fleet-wide health reporting in one screen. Cut maintenance overhead by ~80%.
- Built bulk deployment for plugins, themes, and must-use plugins: artifacts stored in S3 and pushed to any subset of sites in one run, with optional activation and targeting of only sites that need the update, replacing site-by-site manual installs.
- Wrote a companion WordPress client plugin exposing a secret-key-secured REST endpoint, plus a Safe Mode that hooks in before plugins load so a fatal error or white screen can be recovered by deactivating a plugin or resetting the theme without host panel access.
- Integrated Bitrix24 so CRM deal stages drive site lifecycle: cancelled deals auto-close the site frontend with a 503 while leaving wp-admin reachable, and restore automatically when the deal changes. Added self-registration with an approval queue and SSL reissue through cPanel AutoSSL.

Early Bird College, admissions & student management dashboard

2024

Client project · WordPress · PHP · Django · Python · JavaScript · AI chat · AWS · payments · earlybirdcollege.com

- WordPress front end for applications and accounts, Django back end for payment processing and enrolment logic. Replaced a manual spreadsheet process with a live dashboard, saving staff hours weekly and reducing enrolment errors.
- Built the site's AI chat system from scratch, integrated with Django so it queries the live database to answer prospective-student questions about colleges, courses, and enrolment, returning real records instead of generic replies and cutting the volume of repeat enquiries reaching staff.

ITBS Business Tracking, bespoke case-tracking dashboard

2024

Client project · Duda · JavaScript · GitHub Pages · AWS Amplify · identitytheftbusinesssolutions.com

- Custom tracking system for business identity-theft cases, fully decoupled from the client's Duda site so it could evolve independently. Replaced disconnected spreadsheets and email chains.

WLAF Ad Platform, ad rotator & management dashboard for a radio station

2024

Client project · WordPress plugin · PHP · JavaScript · AWS Lambda · S3 · CloudFront · 1450wlaf.com

- Built a custom WordPress plugin that serves a rotating advertisement slot on the station's news site, with click-through routing to each advertiser's destination and creatives delivered from S3 via CloudFront.
- Built the accompanying admin dashboard on Lambda and S3 so station staff can add advertisers and update images, links, and rotation themselves, with changes appearing on the live site immediately and no developer involvement or WordPress media handling required.

Server Checker, fleet uptime & health monitoring

2025 · ongoing

Self-initiated internal tool · Node · JavaScript · REST API · cron · AWS · CloudFront

- Scheduled checks across 500+ sites for downtime, SSL expiry, and server errors, with email and webhook alerting. Full fleet visibility without per-site third-party pricing.

TECHNICAL SKILLS

WordPress: custom plugin development, custom themes, WooCommerce, Gutenberg blocks, ACF, multisite, hooks and filters, WP REST API, PHP

Shopify: custom and private app development, Admin API, Storefront API, OAuth, webhooks, Liquid, Shopify Plus, metafields

Development: JavaScript, TypeScript, React, Node, Python, REST APIs, MySQL, Git

Cloud & DevOps: Google Cloud, AWS, cloud functions, storage buckets, Cloud DNS, IAM, CI/CD, CloudFront

AI integration: OpenAI API, Gemini API, Claude API, chatbots, RAG and embeddings, AI features built into WordPress plugins and Shopify apps, AI-driven automation

Other platforms: Wix, Duda, PixelTogether

EDUCATION

Bachelor of Computer Science, University of Southern Philippines

2003 – 2007
